	<p>Continued From page 3</p> <p>moderate-to-severe pain.) On 8/12/07, at 1:45 pm, a physician ordered Dilaudid 2 mg/hr (milligrams per hour) by continuous IV infusion.</p> <p>Over the ensuing days, Patient 1's condition declined, such that on 8/15/07 at 9:45 am, Patient 1's code status was changed, by his physician, to Do Not Resuscitate (DNR) with comfort/supportive care. (Code status is a term used to describe what specially trained staff is to do for the patient in the case of an emergent situation). On 8/18/07 at 10:45 am, Patient 1's physician increased the Dilaudid dosage to 3 mg/hr via continuous infusion. On 8/25/07, at approximately 9 am, Patient 1's physician again increased the Dilaudid infusion rate from 3 mg/hr to 6 mg/hr continuously, with additional boluses of 3 mg IV to be given every 30 minutes, as needed (for breakthrough pain). This order was noted by nursing staff at 9:40 am. Concurrent review of Patient 1's Medication Administration Records (MARs) indicated that the change in infusion rate, from 3 mg/hr to 6 mg/hr, was done at 11 am, and that a new cassette, containing 300 mg/30 ml (milliliters) Dilaudid, was started at 12 noon by Registered Nurse 1 (RN 1). The MAR included an "addendum," on 8/25/07, at 4:35 pm, that read, "Addendum 300 mg given", followed by RN 1's initials.</p> <p>In an interview on 8/30/07 at 3 pm, RPh1 stated that he changed the concentration of the Dilaudid from 1 mg/1ml to 10mg/ml, without a physician's order. He indicated that he made the concentration change for staff convenience. RPh1 stated that on 8/25/07 at approximately 4 pm, RN 1 called him to</p>

	<p>Continued From page 4</p> <p>request another Dilaudid cassette. It was at this time that the medication error was discovered.</p> <p>In an interview on 8/30/07 at 4 pm, RN 1 stated that on 8/25/07 at about 4 pm, she contacted the pharmacy to request another Dilaudid cassette. RN 1 indicated that the physician was notified of the error and ordered to continue the Dilaudid at 6mg/hr. A concurrent review of the physician notification, dated 8/25/07 and timed 4:15 pm, indicated that the physician was notified of a medication error and there were "no new orders." A review of the physician's orders indicated that there were no new orders related to the medication error of 8/25/07 at or around 4-4:30 pm.</p> <p>RN 1 stated that when the medication error was discovered, she and another RN checked Patient 1's respirations. RN 1 stated that Patient 1's respirations were 24-26. There was no documented assessment in the nurses notes of Patient 1's condition from 11 am to 4:59 pm.</p> <p>A review of the nurses notes, dated 8/25/07, indicated that after the medication error was discovered, Patient 1 was assessed at 5:30 pm and at 8 pm.</p> <p>A review of the 5:30 pm nursing assessment indicated that Patient 1 had severe weakness; his respirations were regular and unlabored at a rate of 26. Lungs were coarse with diminished breath sounds. Patient 1's pulse was strong and irregular (pulse rate was not documented). Patient 1's level of consciousness was not assessed.</p>

--------------------	--	---------------	---	--------------------

	<p>Continued From page 5</p> <p>A review of the 8 pm nursing assessment indicated that Patient 1 was weak, lethargic, mildly anxious and made no purposeful movement. Respirations were labored and shallow. Lungs were coarse sounding. Patient 1 was gurgling and his skin was edematous.</p> <p>The amended "Discharge Summary," dated 8/28/07, indicated that "There was a medication error between pharmacy and nursing, and he (Patient 1) ended up getting a final concentration dose of 66.0 mg/hour from 12 noon to 4 pm on Saturday (8/25/07)." Patient 1 expired on 8/26/07 at approximately 1 am.</p> <p>Manufacturer dosing guidelines indicated that the usual 4-hour limit (standard dosing guideline) for patient controlled analgesia, in an opiate-naïve patient, was 4 to 6 mg. Patient 1, who had been receiving opioids chronically, had been receiving 12 mg over a 4-hour period continuously prior to his physician increasing the dosage on 8/25/07 to 6 mg/hr (or 24 mg over a 4-hour period). The dosage was doubled. Record review indicated that Patient 1 actually received "66 mg/hr" instead of 6 mg/hr, or 300 mg over a 4-hour time period (effectively increasing the dosage 10-fold or 1000 percent).</p> <p>In an interview with the Director of Pharmacy (DOP) on 9/04/07 at 9:50 am, he stated that there were no standardized drug concentrations for IV opiates (narcotics) and that the pharmacist may concentrate IV solutions, per physician order, nursing request, or at the pharmacist's discretion.</p>

	<p>Continued From page 6</p> <p>In the latter case, a pharmacist may concentrate an IV Dilaudid solution from 1 mg/ml to 5 mg/ml or even 10 mg/ml, depending upon the circumstances. The DOP also stated that the circumstances in which the pharmacist may do so are not identified by policy or procedure. The DOP further stated that for Patient 1, on 8/25/07, the pharmacist (RPh 1) had taken it upon himself-in the absence of a physician order to do so, or clear guidelines, as established by policy and procedure-to concentrate Patient 1's IV Dilaudid solution from 1 mg/ml to 10 mg/ml. The DOP indicated that RPh 1 had done so, for staff convenience, to provide nursing with a single medication cassette (a 24-hour supply) instead of multiple cassettes, each lasting up to 5 hours, which would be needed given the ordered infusion rate of 6 mg/hr. The DOP also stated that that there was no policy and procedure that required any additional warning labeling to alert the medication nurse(s) to this type of change.</p> <p>On 9/04/07, at approximately 10 am, a copy of the medication label for Patient 1's IV Dilaudid therapy, following the change in dosage on 8/25/07, was provided by the DOP. It included the name of the patient and medication; it listed the concentration of the medication (300 mg/30 ml); it did not specify the infusion rate (i.e., 6 mg/hr) or the 4-hour limit (i.e., 24 mg). In an interview with the Assistant Director of Pharmacy (ADOP), on 9/07/07 at approximately 10:45 am, he stated that the IV labeling was incorrect and that all of that information should have been included (i.e., infusion rate and 4-hour limit). He then produced the pharmacy generated "Medication Detail" form which</p>

	<p>Continued From page 10</p> <p>root cause of prescribing and administration errors. Sometimes, for a reason such as fluid restriction, a more concentrated form of a drug may be requested. These nonstandard concentrations are a set up for failures unless every single clinician that may change the order, adjust the pump, or prepare and dispense the drug is knowledgeable about them."</p> <p>One of the 12 interventions that the Institute for Healthcare Improvement (IHI) recommends for its 5 Million Lives Campaign-which has set a target of reducing five million incidents of harm from December 2006 to December 2008-is to "Prevent Harm from High-Alert medications ...starting with a focus on ...narcotics (opiates)" Specific recommendations to improve safety with the use of narcotics included (that) "patient-controlled analgesia should be independently double-checked on the unit."</p> <p>"High-Alert Medications: Safeguarding against Errors," published by the American Pharmaceutical Association in 1999, concluded that a majority of medication errors resulting in death or serious harm involved a small number of specific medications. The study conducted by the ISMP termed medications having the highest risk of causing injury as "high alert medications." Opiates and narcotics were identified by the ISMP study are among the top-five high-alert medications, indicating that they have a particularly high risk of causing patient harm, including serious harm and death.</p>

	<p>Continued From page 11</p> <p>The cumulative effect of these systemic problems resulted in the hospital's inability to ensure the provision of quality health care in a safe and effective manner. The violation(s) has caused or is likely to cause serious injury or death to patient(s). As a result of these findings, at 2:35 pm, on 9/06/07, the presence of an Immediate Jeopardy was declared.</p> <p>On 9/10/07, at approximately 12 noon, a Plan of Correction (POC) was provided that included revised policies and procedures for the infusion of narcotics; double checks of high-risk medications; high-risk medication use; and a new policy and procedure for standardized IV medication concentrations. The POC was accepted, and on 9/10/07, at 1:05 pm, the Immediate Jeopardy was abated.</p>
