

## Would you like your prenatal screening specimens to arrive at the lab just one day after shipment?

## Would you like to be able to track your specimens during shipment?

You now have a special opportunity to use a courier, General Logistics Systems (GLS), for specimen delivery to the California Prenatal Screening Program.

While the post office can still be used to mail specimens, the Program would strongly encourage you to start using GLS.

There is **no charge to clinicians or draw stations for GLS delivery services**. This company may be able to pick up samples for your facility, or you can drop them off at a local drop box. See attached flyer for details.

The advantages of using GLS include:

- Just one day in transit, ensuring that blood analytes won't have expired on arrival
- Ability to track your specimen shipments on-line
- Faster turnaround for results

---

To take advantage of this great opportunity,  
Fax: 916.636.5105 or email:  
[mstewart@gls-us.com](mailto:mstewart@gls-us.com) and reference  
**account 52544**. Once your information is  
received, you will be contacted by GLS to  
obtain the necessary free shipping  
and supply information.
